Re: IHM Licenses, LLC (IHM)  
KXYZ(AM), Houston, TX  
Facility Identification Number: 95  
Special Temporary Authority (STA)  
BESTA-20220228AAD

Dear Mr. Langham:

This is in reference to the request filed on February 28, 2022. IHM requests a further extension of the STA granted on January 12, 2021, as last modified on March 5, 2021, to continue operating using one of the existing KPRC site towers to allow time to file the FCC Form 302 license application.<sup>1</sup> In support of the request, IHM stated that additional time is needed to file the application to collocate with station KPRC at the existing KBME transmitter site.

Requests for extension of STA will be granted only where the licensee can show that one or more of the following criteria have been met:

- Restoration of licensed facilities is complete and testing is underway;
- Substantial progress has been made during the most recent STA period toward restoration of licensed operation; or
- No progress has been made during the most recent STA period for reasons clearly beyond the licensee's control, and the licensee has taken all possible steps to expeditiously resolve the problem.

Accordingly, the request for extension of the STA IS HEREBY GRANTED, and IHM may continue to operate with the following facilities:

|                        |   |
|------------------------|---|
| Geographic coordinates | 29° 48' 17" N, 95° 16' 43" W (NAD 1927) |
| Frequency              | 1320 kHz                                |
| Hours of operation     | day and night                           |

---

<sup>1</sup> KXYZ(AM) is licensed for DA operation on 1320 kHz with 10 kW daytime and 5 kW nighttime, using different patterns, and BP-20210125ACC authorizes use of new DA patterns at the KBME transmitter site.

|                               |                              |
|-------------------------------|------------------------------|
| Operating power               | 8.8 kW (day), 2.4 kW (night) |
| Antenna type                  | Existing KPRC(AM) tower      |
| ASRN                          | 1045590                      |
| Overall height above ground   | 81.4 meters (267 feet)       |
| Electrical height of radiator | 125.1°                       |
| Antenna Efficiency            | 328.1 mV/m per kW at 1 km    |

IHM must reduce power or cease operation if complaints of interference are received, and use whatever means are necessary to protect workers and the public from exposure to radio frequency radiation in excess of the Commission's exposure guidelines. *See* 47 CFR § 1.1310.

This authority expires on **September 14, 2022**.

Sincerely,

Joe Szczesny, Engineer  
Audio Division  
Media Bureau
