SECTION II - APPLICANT INFORMATION		
1. NAME OF APPLICANT iHM Licenses, LLC		
MAILING ADDRESS 7136 S Yale Ave, Suite 501		
CITY Tulsa	STATE OK	ZIP CODE 74136

2. This application is for:

☑ Commercial ☐ Noncommercial

☑ AM Directional ☐ AM Non-Directional

Call letters	Community of License	Construction Permit File No.	Modification of Construction Permit File No(s).	Expiration Date of Last Construction Permit
WMT	Cedar Rapids, IA			

3. Is the station now operating pursuant to automatic program test authority in accordance with 47 C.F.R. Section 73.1620?

☑ Yes ☐ No

If No, explain in an Exhibit.

Exhibit No.

4. Have all the terms, conditions, and obligations set forth in the above described construction permit been fully met?

☐ Yes ☐ No

If No, state exceptions in an Exhibit.

Exhibit No. N/A

5. Apart from the changes already reported, has any cause or circumstance arisen since the grant of the underlying construction permit which would result in any statement or representation contained in the construction permit application to be now incorrect?

☐ Yes ☐ No

If Yes, explain in an Exhibit.

Exhibit No. N/A

6. Has the permittee filed its Ownership Report (FCC Form 323) or ownership certification in accordance with 47 C.F.R. Section 73.3615(b)?

☐ Yes ☐ No

☐ Does not apply

If No, explain in an Exhibit.

Exhibit No.

7. Has an adverse finding been made or an adverse final action been taken by any court or administrative body with respect to the applicant or parties to the application in a civil or criminal proceeding, brought under the provisions of any law relating to the following: any felony; mass media related antitrust or unfair competition; fraudulent statements to another governmental unit; or discrimination?

☐ Yes ☑ No

If the answer is Yes, attach as an Exhibit a full disclosure of the persons and matters involved, including an identification of the court or administrative body and the proceeding (by dates and file numbers), and the disposition of the litigation. Where the requisite information has been earlier disclosed in connection with another application or as required by 47 U.S.C. Section 1.65(c), the applicant need only provide: (i) an identification of that previous submission by reference to the file number in the case of an application, the call letters of the station regarding which the application or Section 1.65 information was filed, and the date of filing; and (ii) the disposition of the previously reported matter.

Exhibit No.

CLEAR ALL PAGES

8. Does the applicant, or any party to the application, have a petition on file to migrate to the expanded band (1605-1705 kHz) or a permit or license either in the existing band or expanded band that is held in combination (pursuant to the 5 year holding period allowed) with the AM facility proposed to be modified herein?

☐ Yes ☑ No

If Yes, provide particulars as an Exhibit.

Exhibit No.

The APPLICANT hereby waives any claim to the use of any particular frequency or of the electromagnetic spectrum as against the regulatory power of the United States because use of the same, whether by license or otherwise, and requests and authorization in accordance with this application. (See Section 304 of the Communications Act of 1934, as amended).

The APPLICANT acknowledges that all the statements made in this application and attached exhibits are considered material representations and that all the exhibits are a material part hereof and are incorporated herein as set out in full in

CERTIFICATION

1. By checking Yes, the applicant certifies, that, in the case of an individual applicant, he or she is not subject to a denial of federal benefits that includes FCC benefits pursuant to Section 5301 of the Anti-Drug Abuse Act of 1988, 21 U.S.C. Section 862, or, in the case of a non-individual applicant (e.g., corporation, partnership or other unincorporated association), no party to the application is subject to a denial of federal benefits that includes FCC benefits pursuant to that section. For the definition of a "party" for these purposes, see 47 C.F.R. Section 1.2002(b).

☑ Yes ☐ No

2. I certify that the statements in this application are true, complete, and correct to the best of my knowledge and belief, and are made in good faith.

FCC NOTICE TO INDIVIDUALS REQUIRED BY THE PRIVACY ACT AND THE PAPERWORK REDUCTION ACT

The solicitation of personal information requested in this application is authorized by the Communications Act of 1934, as amended. The Commission will use the information provided in this form to determine whether grant of the application is in the public interest. In reaching that determination, or for law enforcement purposes, it may become necessary to refer personal information contained in this form to another government agency. In addition, all information provided in this form will be available for public inspection. If information requested on the form is not provided, the application may be returned without action having been taken upon it or its processing may be delayed while a request is made to provide the missing information. Your response is required to obtain the requested authorization.

Public reporting burden for this collection of information is estimated to average 639 hours and 53 minutes per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing the burden, can be sent to the Federal Communications Commission, Records Management Branch, Paperwork Reduction Project (3060-0627), Washington, D. C. 20554. Do NOT send completed forms to this address.

THE FOREGOING NOTICE IS REQUIRED BY THE PRIVACY ACT OF 1974, P.L. 93-579, DECEMBER 31, 1974, 5 U.S.C. 552a(e)(3), AND THE PAPERWORK REDUCTION ACT OF 1980, P.L. 96-511, DECEMBER 11, 1980, 44 U.S.C. 3507.

Table of Contents

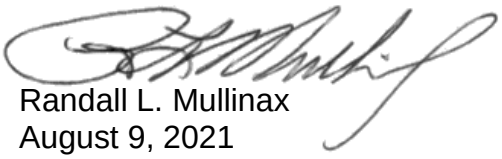
Engineering Statement

This application is being filed to relicense the existing operations of WMT(AM), Cedar Rapids, IA following replacement of Tower 3(S) which was destroyed by high winds in August, 2020. The applicant requests licensing of the nighttime directional operation of WMT pursuant to sections of 47 CFR 73.151 which allow performance verification by computer modeling and sampling system verification. The only change to the WMT radiators was the replacement of Tower 3(S) with a new tower of the same electrical height. All antenna system and Reference Point field measurements included in this application were made by Nicolas Blomstrand and the undersigned July 28th and 29th, 2021.

Analysis of this antenna system was performed using a combination of a method of moments model and a circuit model. The method of moments model was produced using the computer program Expert MININEC Broadcast Professional version 14.5 by EM Scientific Inc. The circuit model was produced using the nodal analysis program WCAP Pro version 1.1 by Westberg Consulting. The method of moments models and the circuit models for each radiator were adjusted to produce the same matrix impedances as those measured by varying the electrical height of the radiators and by adding shunt capacitive loads and series inductance using the circuit model.

Once the models were adjusted to match the measured matrix impedances, the array synthesis module of the program was used to calculate the proper base drive voltages to generate the fields necessary to form the required pattern for nighttime operation. The current distribution was calculated for each radiator and given that the sampling system utilizes base current sampling devices the operating parameters calculated from the resulting currents at each base node and the associated circuit model. The unused radiators are floated for daytime non-directional operation.

Program test authority is respectfully requested at the currently licensed power level.



Randall L. Mullinax
August 9, 2021

Description of Radiators

The WMT(AM) radiators are triangular, uniform cross section, guyed towers. Towers 1(W), and 2(E) are 90.5 electrical degrees in height and Tower 3(S) is 65.9 electrical degrees in height. All three towers have a face width of 61.0 centimeters. Tower 2(E) supports a side-mounted 4-bay FM antenna for KOSY-FM. The results of the post construction survey confirm that the radiators fall within the required 1.5 electrical degree tolerance.

Tower #	ASRN	Face Width	Electrical Height
1(W)	1024391	61 cm	90.5°
2(E)	1024392	61 cm	90.5°
3(S)	1320134	61 cm	65.9°

Description of Model

The overall model of the antenna system consists of two components: the method of moments model and the circuit model. The method of moments model was adjusted by varying the electrical height of the radiators to produce an impedance at the base node such that when combined with the circuit model produced an impedance within +/- 2Ω and +/- 4% of the measured matrix resistance and reactance at the sample point. The modeled electrical heights used fall within the range of 70-125% of the physical height. The effective radii used fall within the range of 80-150% of the radius of a circle with a circumference equal to the sum of the widths of the tower sides.

The circuit model consists of a lumped series inductive reactance and a lumped shunt capacitive reactance combined with the calculated base impedance produced by the method of moments model.

Description of Ground System

No changes were made to the ground system which consists of 100, 137.2 meter equally spaced, buried copper wire radials about the base of each tower, plus a 7.3 meter square ground screen at the base of each tower. Radials are shortened and bonded to copper strap where they would overlap between towers.

Description of Sampling System

The sampling system consists of equal lengths of 3/8" solid outer jacket coaxial cable connected to Delta Electronics model TCT-1 toroidal current transformers near the base of each tower. The sample lines are buried over their entire length. The antenna monitor is a Potomac Instruments Model AM1901, last calibrated by the manufacturer on September 24, 2014. A Keysight Technologies Model P5020A vector network analyzer was utilized to field-verify that the antenna monitor is operating within the manufacturer's specified tolerance.

Measured Matrix Impedances and WCAP Corrections

Tower 1 driven with Towers 2 and 3 floated 44.34 +j70.23Ω

Tower 2 driven with Towers 1 and 3 floated 44.89 +j72.35Ω

Tower 3 driven with Towers 1 and 2 floated 19.51 -j73.84Ω

TOWER	ZMODEL	ZIN (MODEL)	ZIN (MEASURED)	L(µH)	XL	XC

Measured and Calculated Sampling Line Characteristics

Measured open circuit resonant frequency at odd multiple of ¼ wavelength nearest the carrier frequency:

Tower 1	803.8 kHz	3/4 λ(270°)
Tower 2	805.0 kHz	3/4 λ(270°)
Tower 3	804.5 kHz	3/4 λ(270°)

Measured impedance 1/8 wavelength above and below open circuit resonant frequency:

Tower 1	937.77 kHz	8.91 +j49.06 Ω	+1/8 λ
	669.83 kHz	6.04 –j49.18 Ω	-1/8 λ
Tower 2	939.17 kHz	8.89 +j49.06 Ω	+1/8 λ
	670.83 kHz	6.06 –j49.30 Ω	-1/8 λ
Tower 3	938.58 kHz	8.98 +j48.92 Ω	+1/8 λ
	670.42 kHz	6.10 –j49.06 Ω	-1/8 λ

Calculated characteristic impedance using formula $Z_o = ((R_1^2 + X_1^2)^{1/2} * (R_2^2 + X_2^2)^{1/2})^{1/2}$:

Tower 1	49.71 Ω
Tower 2	49.76 Ω
Tower 3	49.59 Ω

Calculated electrical length at f carrier :

Tower 1	L = (f carrier / f resonant) * 270° = (600 kHz / 803.8 kHz) * 270° = 201.54°
Tower 2	L = (f carrier / f resonant) * 270° = (600 kHz / 805.0 kHz) * 270° = 201.24°
Tower 3	L = (f carrier / f resonant) * 270° = (600 kHz / 804.5 kHz) * 270° = 201.37°

Measured impedance at f carrier at the input of the sampling line with the sampling device connected:

Tower 1	50.67 +j1.41Ω
Tower 2	50.76 +j1.06Ω
Tower 3	50.91 +j0.78Ω

All measurements were made with a Keysight Technologies Model P5020A vector network analyzer with a Tunwall Radio directional coupler in a calibrated measurement system.

Sampling Transformer Calibration

Calibration of the Delta Electronics model TCT-1 toroidal current transformers was confirmed using an Keysight Model P5020A vector network analyzer.

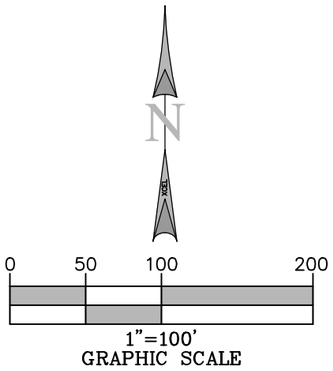
The signal from the generator output of the vector network analyzer was connected to a conductor running through the transformers which was then terminated with a 50Ω load. The network analyzer was set to measure in "transmission" mode and the output of the Tower 1 reference toroidal current transformer was connected to the network analyzer "B" receiver input. A "response" calibration was performed, calibrating the network analyzer for the amplitude and phase characteristics of the reference transformer. The outputs of the remaining toroidal current transformers were then connected in turn to the input of the "B" receiver of the analyzer and the amplitude and phase characteristics were recorded.

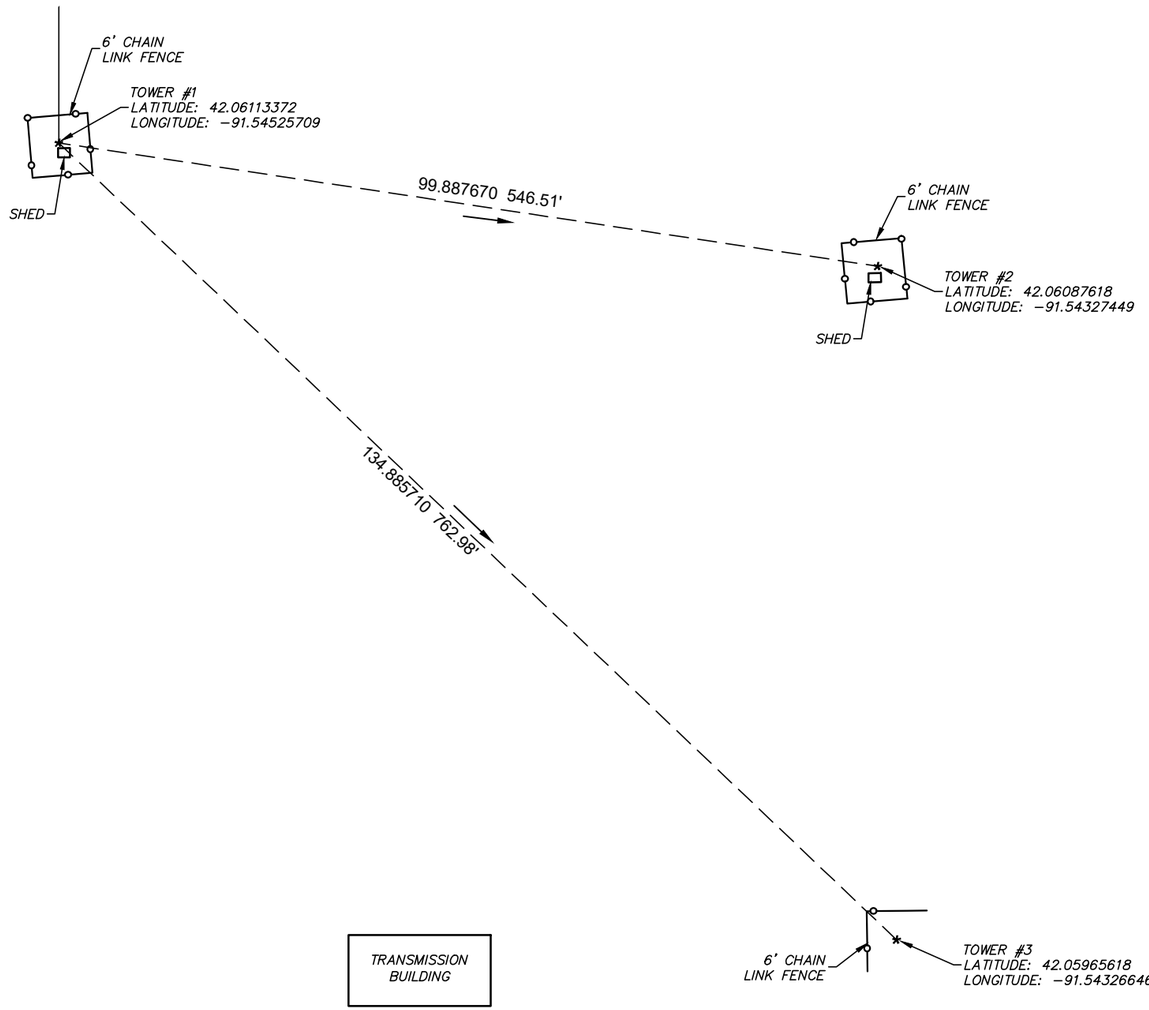
	Indicated Phase	Indicated Ratio
T1	0°	1.000
T2	-0.0158°	1.000
T3	-0.0641°	1.010

The manufacturer specifies these devices to be accurate to within +/- 2% absolute magnitude and +/- 2° absolute phase.

Environmental Statement

The WMT radiators are surrounded by secured fences restricting access by unauthorized personnel and signs are posted in the vicinity of the radiators, warning of potential radio frequency hazards at the site. Based on the charts and graphs supplied in Supplement A, Edition 97-01 to OET bulletin 65, Edition 97-01 the applicant certifies that the distance to the fences from the radiators complies with FCC OET65 regarding human exposure to non-ionizing electromagnetic radiation.





GENERAL NOTES

AZIMUTHS BASED ON TRUE NORTH

TOWER LOCATIONS VERIFIED ON 7/22/2021.

I HEREBY CERTIFY TO: VERTICAL BRIDGE REIT, LLC, A DELAWARE LIMITED LIABILITY COMPANY, ITS SUBSIDIARIES, AND THEIR RESPECTIVE SUCCESSORS AND/OR ASSIGNS;

I, DAN J. KUEHL, AN IOWA PROFESSIONAL LAND SURVEYOR, CERTIFY THAT THE INFORMATION SHOWN HEREON WAS COMPILED USING DATA FROM AN ACTUAL FIELD SURVEY MADE UNDER MY DIRECT SUPERVISION AND THAT THE FIELD SURVEY AND THE COMPILATION OF INFORMATION SHOWN HEREIN WERE CONDUCTED IN ACCORDANCE WITH THE IOWA MINIMUM STANDARDS OF PRACTICE.
