ENGINEERING REPORT
ANTENNA IMPEDANCE MEASUREMENTS

American Tower owner of the site used by WSB 750 kHz, Atlanta, GA has changed the tower lighting system for this facility. WSB operates using a non-directional-tower array for fulltime operations at 50 kW. To make changes on the tower structure requires measurement of the post construction tower impedance.

Measurements made January 17th with a Hewlett-Packard 4396A Network Analyzer of the non-directional antenna at the base current meter location showed an antenna resistance of 131.2 ohms, compared to the licensed value of 148.5 ohms, a change of 11.2%. Therefore FCC Form 302-AM for direct power measurement for the daytime operation will be filed.

Please let us know if there are any additional questions.

Sincerely,

Benj. F. Dawson III, P.E.
