Reason for STA Extension

Gold Coast Broadcasting LLC, the licensee of KVTA(AM), Ventura, California (FAC: 7746) has continued to work on the conversion of KVTA(AM) to method of moments modeling and it was discovered by local engineers that the main transmitter was in need of repair before the modeling and measurements could proceed. After a delay in securing the parts needed the local engineers were in the process of making the necessary repairs to the transmitter. Unfortunately, prior to the completion of the repairs in early January, the area started receiving very heavy rains that continued for several days and as a result, the KVTA site sits below flood stage of the adjacent Santa Clara River. The KVTA site was inundated with flood waters and debris from the river overflowing its banks. The site has been heavily damaged by the flooding and the licensee is still in process with its engineers and insurance carrier to assess the extent of the damages to the KVTA towers, antenna tuning units, ground radials, cable conduits and electrical circuits.

Consulting engineer, Ben Dawson of Hatfield & Dawson Engineering, has made an early suggestion that the licensee consider modifying KVTA to revert to a single non-directional operation using just the tall main tower. It will take some time to finish the assessment of damage and make a determination of how to best proceed however, in the meantime, the licensee respectfully requests that the FCC grant further extension of the STA.
