Re: Siga Broadcasting Corporation
KHFX(AM), Cleburne, TX
Facility Identification Number: 65313
File Number: BP-20090303AAP

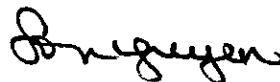

Dear Applicant:

The staff has under consideration the above-captioned application for a modification of AM broadcast station KHFX to increase daytime power.

A preliminary review of the application, as amended, reveals that the proposed daytime of 25.0 kW with a theoretical RMS of 1411.00 mV/m will result in a loss resistance per tower of 1.41 ohms. The nominal power and specified theoretical RMS of the proposed standard radiation patterns must result in a 1 ohm loss resistance per tower pursuant to Section 73.150 of the Commission's Rules. According to our calculations the RMS would have to be adjusted to 1424.72 mV/m (using 25 kiloWatts) to meet the one ohm loss requirement.

Accordingly, further action on the subject application will be withheld for a period of thirty (30) days from the date of this letter to provide you an opportunity to submit an amendment to the application. Failure to respond within this time period will result in the dismissal of the application pursuant to Section 73.3568. Please note that any amendment must be submitted in the same manner as the original application.

Sincerely,

Son Nguyen
Supervisory Engineer
