Dear Counsel:

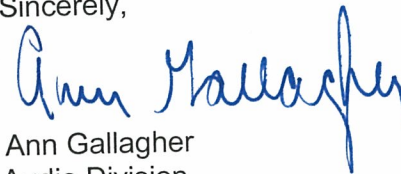

This is in reference to the above-captioned license application. The staff's review shows the following deficiencies in the application.

According to Section 73.151(c), the specification of the physical characteristics of the AM antenna may not violate the internal guidelines for the method of moments software used to model the array. In this case, the segment length-to-radius ratio violates the software's guidelines for the lower four wire segments used to model each tower. We have not evaluated the impedances and current distributions predicted by the model, as it fails to meet this basic criterion.

As the Media Bureau's October 29, 2009, *Public Notice* stated, the moment method proof should include a certificate or statement verifying that the antenna monitor is properly calibrated, as Section 73.69(3) requires.

Further action on the subject license application will be withheld until the applicant submits an amendment addressing the deficiencies described above. Failure to respond within 60 days from the date of this letter may result in dismissal of the application pursuant to 47 CFR Section 73.3568(a)(1).

Sincerely,

Ann Gallagher  
Audio Division  
Media Bureau
