Re: CCR-Great Falls IV, LLC
KMON(AM), Great Falls, MT
Facility ID Number: 62330
File Number: BMML- 20110415ABP

Dear Counsel:

This is in reference to the above-captioned application for licensing of the KMON antenna system using computer modeling and sample system verification.

A preliminary engineering study of the application reveals the following deficiencies:

1. The reference field strength measurements in the direction of the pattern maximum were not provided.
2. It appears that the base circuit corrections for the antenna monitor phase were not applied correctly. In addition, the use of an assumed input current of 1 ampere in the circuit analysis does not provide enough significant digits to calculate current magnitude with sufficient accuracy.
3. The characteristic impedance of the sample lines was not determined with measurements at the frequencies corresponding to 1/8 wavelength above and below the open circuit resonant frequency closest to the carrier frequency (approximately 306 kHz). Instead, the measurements centered on the second resonant frequency, approximately 928 kHz. Please explain.
4. The frequency used to measure the sample line impedance with the respective toroid sampling devices connected was not provided. Please confirm whether these measurements were taken at carrier frequency or at some other frequency.

Further action on the application will be withheld for thirty days from the date of this letter in order to provide CCR-Great Falls IV, LLC an opportunity to file a curative amendment. Failure to respond or file an amendment within this time period will result in the dismissal of the application pursuant to Section 73.3568 of the rules.

Sincerely,

Ann Gallagher
