Construction permit: BMP-20120125AAB  
License application: BMML-20120312ADG  
Program Test Authority

Dear Counsel:

Authority is granted KPSF to conduct limited program tests in accordance with Section 73.1620 and the construction permit identified above. KPSF shall operate on 1200 kHz with a nominal daytime power of 2.5 kilowatts, and nominal nighttime power of 600 watts. Program tests are authorized with a reduced daytime antenna input power of 2.7 kilowatts (common point current 7.35 amperes) and with reduced nighttime antenna input power of 0.65 kilowatt (common point current 3.6 amperes).

According to the survey submitted with the license application, the actual tower orientation and spacing values of the existing antenna array that KPSF shares differ from theoretical values by more than the allowable 1.5-electrical degree tolerance. Consequently, KPSF must submit an application on FCC Form 301 to adjust its theoretical antenna parameters and to demonstrate that no interference would result from the adjustment.

Upon submission of the required Form 301, the staff will consider modifying PTA to permit operation at full power.

Sincerely,

Ann Gallagher
