Re: WNWR(AM), Philadelphia, Pennsylvania  
Facility Identification Number: 1027  
Global Radio, LLC  
Special Temporary Authorization

Dear Mr. Edwards:

This is in reference to the request filed April 9, 2012, on behalf of Global Radio, LLC ("GR"). GR requests extension of the special temporary authority ("STA") granted on October 26, 2011, for operation of Station WNWR with parameters at variance from licensed values and/or reduced power while maintaining monitor points within licensed limits, with a temporary nondirectional antenna and reduced power, and with its substantially adjusted daytime directional antenna pattern.<sup>1</sup> In support of the request, GR states that it has completed repairs and renovations to the WNWR antenna system, and that it is in the process of preparing an application for modification of license supported by a proof of performance based on Method of Moments ("MOM") analysis, pursuant to Section 73.151(c).

Requests for extension of STA will be granted only where the licensee can show that one or more of the following criteria have been met:

- Restoration of licensed facilities is complete and testing is underway;
- Substantial progress has been made during the most recent STA period toward restoration of licensed operation; or
- No progress has been made during the most recent STA period for reasons clearly beyond the licensee's control, and the licensee has taken all possible steps to expeditiously resolve the problem.

Our review indicates that the licensee has made substantial progress toward restoring licensed operation. Thus, extension of STA is warranted. Based on the information provided, the STA is modified to remove modes of operation that are no longer necessary.

---

<sup>1</sup> WNWR is licensed for operation on 1540 kHz with 50 kilowatts, daytime hours only, employing a directional antenna (DA-D-D).

Accordingly, the request for extension of STA IS HEREBY GRANTED, with modification as discussed above. Station WNWR may continue to operate with its substantially adjusted daytime directional antenna system pending the filing and processing of an application for modification of license supported by a MOM proof of performance pursuant to 47 C.F.R. Section 73.151(c). Operating parameters shall be maintained within  $\pm 5\%$  current ratios and  $\pm 3^\circ$  phase of the MOM-derived parameters, which shall be posted with the station license along with a copy of this letter. It will be necessary to reduce power or cease operation if complaints of interference are received. GR must use whatever means are necessary to protect workers and the public from exposure to radio frequency radiation in excess of the Commission's exposure guidelines. *See* 47 CFR § 1.1310.

This authority expires on **November 21, 2012**.

Sincerely,

A handwritten signature in blue ink, appearing to read "Charles N. Miller", with a long horizontal flourish extending to the right.

Charles N. Miller, Engineer
