Re: Clear Channel Broadcasting Licenses, Inc.
KTOK (AM), Oklahoma City, Oklahoma
Facility Identification Number: 11925
Special Temporary Authority

Dear Mr. Langham:

This is in reference to the request filed August 16, 2012, on behalf of Clear Channel Broadcasting Licenses, Inc. ("CCBL"). CCBL requests extension of the special temporary authority ("STA") granted on March 5, 2012, to operate Station KTOK pursuant to Section 73.1615.¹ In support of the request, CCBL states that it is waiting for processing of Application BMP-20120713ABJ² and Method of Moments ("MOM") License Application BMML-20120713AEL.

Requests for extension of STA will be granted only where the licensee can show that one or more of the following criteria have been met:

- Restoration of licensed facilities is complete and testing is underway;
- Substantial progress has been made during the most recent STA period toward restoration of licensed operation; or
- No progress has been made during the most recent STA period for reasons clearly beyond the licensee's control, and the licensee has taken all possible steps to expeditiously resolve the problem.

¹ KTOK is licensed for operation on 1000 kHz with 5 kilowatts, unlimited hours, employing different directional antenna patterns daytime and nighttime (DA-2-U). Construction Permit BP-20100830ABU authorizes a reduction in the height of one of the station's towers and an increase in operating power to 5.8 kilowatts. Application BMP-20120713ABJ makes a slight (0.3°) correction to the orientation of the towers in the array, based on the post-construction survey.

² See Note 1, above.

Our review indicates that the licensee has made substantial progress toward restoring licensed operation; thus, extension of STA is warranted. Based on the information provided, the STA is modified to specify the modes of operation currently in use.

Accordingly, the request for STA IS HEREBY GRANTED, with modification as discussed above. Station KTOK may continue to operate with the substantially adjusted daytime and nighttime directional patterns authorized by the permit, with reduced nominal power of 5 kilowatts. Operating parameters must be maintained within $\pm 5\%$ current ratios and $\pm 3^\circ$ phase indications of the MOM-derived operating parameters, which must be posted with the station license along with a copy of this letter. It will be necessary to further reduce power or cease operation if complaints of interference are received. CCBL must use whatever means are necessary to protect workers and the public from exposure to radio frequency radiation in excess of the Commission's exposure guidelines. See 47 CFR § 1.1310.

This authority expires on **March 5, 2013**.

Sincerely,

A handwritten signature in blue ink, appearing to read "Charles N. Miller", with a stylized flourish at the end.

Charles N. Miller, Engineer
