Subject: Re: WRQR(AM)

Thank you for your quick reply. WRQR proposes operation using tower #2 at reduced power of approximately 600 watts ND during daytime and critical hours for the period of time workers will be on or in the vicinity of tower#1.

Thanks again.

Mr. Watson,

We received the STA request (BSTA-20140324AEJ) for AM station WRQR(AM). Please send me an email specifying which facility the station would like to operate, as it appears the station is proposing operation with two different facilities. The station will need to either specify emergency antenna operations per Section 73.1680 using tower #2 at reduced power not to exceed 25% of the daytime or nighttime power, or operate with the licensed antenna system at reduced power per Section 73.1560. Once I receive your response I can take further action on the STA request.

Regards
Jerry
