Re: WNYC-FM, New York, New York
Facility Identification Number: 73355
New York Public Radio
Special Temporary Authorization
BESTA-20140513ABG

Dear Counsel:

This is in reference to the request filed May 13, 2014, on behalf of New York Public Radio ("Radio"). Radio requests further extension of the special temporary authority ("STA") originally granted on September 28, 2001, as subsequently modified and extended, to operate Station WNYC-FM with auxiliary facilities at 4 Times Square.¹

In support of the request, Radio states that it has completed construction of auxiliary facilities as authorized by Construction Permit BXPB-20110922AAW and that the facilities are ready for licensing. However, required measurements have yet to be made.

Requests for extension of STA will be granted only where the licensee can show that one or more of the following criteria have been met:

- Restoration of licensed facilities is complete and testing is underway;
- Substantial progress has been made during the most recent STA period toward restoration of licensed operation; or
- No progress has been made during the most recent STA period for reasons clearly beyond the licensee's control, and the licensee has taken all possible steps to expeditiously resolve the problem.

Auxiliary construction permit BXPB-20110922AAW expires September 27, 2014, by which time we expect that all measurements required by the permit will have been made, and a license application filed on FCC Form 302-FM. Consequently, one further STA extension is warranted.

¹ Station WNYC-FM is licensed for operation on Channel 230B (93.9 MHz) with effective radiated power ("ERP") of 5.2 kilowatts (H&V), and antenna height above average terrain ("HAAT") of 415 meters.

The request for extension of STA IS HEREBY GRANTED. Station WNYC-FM may continue to operate with the following facilities, for auxiliary purposes:

Transmitter Site:	4 Times Square, New York, NY
Geographic coordinates:	40° 45' 22" NL, 73° 59' 12" WL (NAD 1927)
Channel	230 (93.9 MHz)
Antenna manufacturer and type	Shively, Model 6016-3/4
Effective radiated power:	10.8 kilowatts (H&V)
Transmitter output power	6.22 kilowatts
Antenna height	
above ground:	283 meters
above mean sea level:	298 meters
above average terrain:	284 meters

Radio must use whatever means are necessary to protect workers and the public from radiofrequency exposure in excess of the Commission's exposure guidelines. *See* 47 CFR § 1.1310.

This authority expires on **November 21, 2014**.

Sincerely,

Dale Bickel
