Re: WMKL(FM), Key Largo, Florida
Facility Identification Number: 61087
Call Communications Group, Inc.
Special Temporary Authorization

Dear Mr. Robbins:

This is in reference to the request filed February 8, 2007, on behalf of Call Communications Group, Inc. ("CCG"). CCG requests special temporary authority ("STA") to operate Station WMKL with temporary facilities.¹ In support of the request, CCG states that its licensed operation on Channel 219, although fully compliant with the Commission's rules on harmonic emissions, is causing interference to a co-located Public Safety receiver. CCG states that it has filed an application for construction permit to change frequency to Channel 220 (91.9 MHz), which will eliminate the interference, and to modify its antenna system. In the interim, CCG requests STA for operation on Channel 220 with the existing antenna system.

Our review indicates that Construction Permit BPED-20070208AAD was granted on February 20, 2007, and that the permit authorizes operation on Channel 220 with 50 kilowatts, vertical polarization only. Our review further indicates that protection to Channel 6 TV Station WTVJ was demonstrated in the application for construction permit on the basis of an equivalent of 5 kilowatts, horizontally polarized. Because the existing antenna is circularly polarized, the maximum effective radiated power which can be authorized is 5 kilowatts. STA will be granted with a power reduction to 5 kilowatts, circularly polarized.

Accordingly, the request for STA IS HEREBY GRANTED, with a power reduction as discussed above. Station WMKL may operate with the following facilities:

Geographic coordinates:	(NAD 1927)
Channel	220 (91.9 MHz)
Effective radiated power:	not to exceed 5 kilowatts (H&V)

¹ WMKL is licensed for operation on Channel 219C2 (91.7 MHz) with effective radiated power ("ERP") of 50 kilowatts (H&V) and antenna height above average terrain of 94 meters. Construction Permit BPED-20070208AAD authorizes a change in frequency to Channel 220C2 (91.9 MHz) and operation with ERP of 50 kilowatts, vertically polarized.

Antenna height:

above ground:	91 meters
above mean sea level:	94 meters
Above average terrain:	91 meters

CCG must use whatever means are necessary to protect workers and the public from exposure to radio frequency radiation in excess of the Commission's exposure guidelines. *See* 47 CFR § 1.1310.

This authority expires on **June 16, 2007**.

STA Advisory: Section 309(f) of the Communications Act of 1934, as amended, authorizes the Commission to grant STA in cases of "extraordinary circumstances requiring temporary authorizations in the public interest and when delay in the institution of the temporary operations would seriously prejudice the public interest." However, Section 309(f) is not a means by which a licensee/permittee may circumvent established processing procedures which require the filing of an application, nor is it a means by which a broadcaster may enhance his facility or make operation more convenient for the broadcaster. Stations operating with less than licensed facilities under temporary authorities can be viewed as receiving the benefit of a larger protection area than that in which they are currently providing service.

Accordingly, Special Temporary Authorities by nature are to be temporary and are not intended for extended use. Licensees of stations operating under temporary authorities are reminded that timely restoration of permanent facilities is the responsibility of the licensee and should be undertaken expeditiously. Any request for extension of special temporary authorities carries an increased burden with each subsequent request.

Therefore, requests for extension of STA will be granted only where the licensee can show that one or more of the following criteria have been met:

- Restoration of licensed facilities is complete and testing is underway;
- Substantial progress has been made during the most recent STA period toward restoration of licensed operation; or
- No progress has been made during the most recent STA period for reasons clearly beyond the licensee's control, and the licensee has taken all possible steps to expeditiously resolve the problem.

Sincerely,

Charles N. Miller, Engineer
