OPINION & ORDER<br>ADOPTED & Waiver of Sec. 73.610 of Rules Granted |         |

1. The maximum visual effective radiated power in the direction of Station KMVT, Twin Falls, Idaho, on an azimuth of 322 degrees true, shall not exceed 16.7 dbk (49 kw).
2. The application for license shall include the following:
  - (a) Horizontal plane radiation pattern based on measurements performed by the manufacturer for the specific antenna specified herein prior to its installation.
  - (b) Vertical radiation patterns obtained from measurements performed by the manufacturer for the specific antenna specified herein prior to its installation for at least the azimuth toward Station KMVT.
  - (c) A description by the manufacturer of the method employed to obtain the antenna field measurements and the antenna gain rating.
  - (d) An affidavit by a qualified and licensed surveyor that the proper azimuthal orientation to achieve the radiation limitations prescribed above for Station KMVT was established at the time of the antenna installation.

## About the History Cards ...

History Cards were first used by the Department of Commerce to keep track of applications filed by, and changes to, the earliest AM broadcast radio stations in the early 1920s. The records were subsequently transferred to the Federal Radio Commission in 1927, and after that to the Federal Communications Commission when that agency was created in 1934. These cards gradually grew into a large card file.

TV History Cards were initiated in the early 1940s, with the authorization of the earliest TV stations. History Cards remained in use until the creation of the first computerized database in 1980 to track broadcast applications, the Broadcast Application Processing System (BAPS). However, the Commission did not transfer the data from the History Cards to the new system. Instead, it retained the History Cards in their original form for reference.

In 1999, the Commission moved to a new location (445 12<sup>th</sup> Street SW), and also at that time created the successor database to BAPS, the Consolidated DataBase System (CDBS). Prior to that move, the History Cards were transferred to microfiche by a contractor (only a few sets of microfiche exist), and the original paper cards were destroyed. The History Cards were stored on the microfiche as negative images, like those you see above.

History Cards contain very brief entries and notes about station facilities, applications, and ownership. They are not, and never were intended to be, a comprehensive record of a station's operations. Nevertheless, they can be useful to help determine, for example, when a station first went on the air and its call letters at that time. History Card comments were generally typed onto the cards, and thus some records will show more faintly or with more smudging than others, depending on the quality of typewriter and ribbon then used. Occasional handwritten comments, corrections, and strikeouts may also be found. Cards may be incomplete, missing, or occasionally out of sequence.

The History Cards are presented here as they were copied to microfiche, to preserve this record for public use, and with the hope that they will be of value to future researchers of television station history.
