I have made a typo in tech box of this app. It's a big one. The Longitude is supposed to be 84 and I entered 83. That places it 60 miles east and well outside the 2.0 mV/M daytime contour of primary station WTAL. I believe everything else is correct including the ASR number which is the tower from which WTAL(AM) broadcasts from. I hoping the intent of putting this application on the WTAL(AM) tower is clear. WTAL is a struggling gospel station, owned by a black minister, the Rev. R.B. Holmes. I am asking that if it is possible to correct my typo so Mr. Holmes can have his FM translator. I searched CDBS and this app if it were properly located would be a singleton and does not conflict with any other applications filed in the window. I would greatly appreciate if you could make it possible that the coordinate error could be corrected. I did this work for almost nothing as a favor to my friend Mark Jorgenson so this is really more of a charity project. That's still no excuse for my error. Please let me know if there's anything I need to do to correct my error. Thanks.
