Re: Way Broadcasting Licensee, LLC (WBL)  
WFBR(AM), Glen Burnie, MD  
Facility Identification Number: 19673  
Special Temporary Authority (STA)  
BESTA-20180320ABG

Dear Mr., Lui:

This is in reference to the request filed on March 20, 2018. WBL requests a further extension of the STA granted on January 5, 2016, to continue operating with parameters at variance to allow time to complete all remaining repairs and file the required FCC Form 302 application.<sup>1</sup> In support of the request, we noted that WBL has not yet filed the application.

Requests for extension of STA will be granted only where the licensee can show that one or more of the following criteria have been met:

- Restoration of licensed facilities is complete and testing is underway;
- Substantial progress has been made during the most recent STA period toward restoration of licensed operation; or
- No progress has been made during the most recent STA period for reasons clearly beyond the licensee's control, and the licensee has taken all possible steps to expeditiously resolve the problem.

Accordingly, the request for extension of STA IS HEREBY GRANTED, and WBL may continue to operate with parameters at variance and reduced power if needed in accordance with §73.1635 and §73.68 of the Commission's rules without portions of its sample lines and an antenna monitor, while maintaining monitor points within licensed limits. Additionally, in accordance with §73.68, immediately prior to modification or replacement of components of the sampling system, and after a verification that all monitoring point values and operating parameters are within the limits or tolerances specified in the rules, the following indications must be recorded for each radiation

---

<sup>1</sup> WFBR(AM) is licensed for DA operation on 1590 kHz with 1 kW day and night.

pattern: Final plate current and plate voltage, common point current, antenna monitor phase and current indications, and the field strength at each monitoring point. Subsequent to these modifications or changes the procedure must be repeated. If monitoring point field strengths or antenna monitor parameters exceed allowable limits following the replacement or modification of that portion of the sampling system above the base of the towers, a partial proof of performance shall be executed in accordance with §73.154. The partial proof of performance shall be accompanied by common point impedance measurements made in accordance with §73.54. An FCC Form 302 application to request a modification of the last license must be filed with the Commission within 30 days of the sampling system modification/replacement, and the application shall specify the transmitter plate voltage and plate current, common point current, base currents and their ratios, antenna monitor phase and current indications, and all other data obtained pursuant to this paragraph.

WBL must use whatever means are necessary to protect workers and the public from exposure to radio frequency radiation in excess of the Commission's exposure guidelines. *See* 47 CFR § 1.1310. If WBL completes the repairs and determines that a 302 filing is not required, then an e-mail must be submitted to my attention to certify the date the station resumed licensed operations per BZ-19991112ACK with negligible changes.

This authority expires on **October 13, 2018**.

Sincerely,

Joseph Szczesny, Engineer  
Audio Division  
Media Bureau
