Re: KFI(AM), Los Angeles, California
Facility Identification Number: 34425
Capstar TX Limited Partnership
Special Temporary Authorization

Dear Counsel:

This is in reference to the request filed February 8, 2008, and supplemented on February 21, 2008, on behalf of Capstar TX Limited Partnership (Capstar). Capstar requests further extension and modification of the special temporary authority (STA) granted on February 11, 2005, for continued operation of Station KFI with its licensed auxiliary facilities.¹ In support of the request, Capstar states that it has obtained Construction Permit BP-20070201BSB to replace the station's collapsed tower and that it has obtained the necessary local zoning approvals for the construction. Capstar requests modification of STA to permit operation from the formerly licensed site of Station KTLK, in order to avoid high radio frequency field strengths at the permit site during the tower construction.

Requests for extension of STA will be granted only where the licensee can show that one or more of the following criteria have been met:

- Restoration of licensed facilities is complete and testing is underway;
- Substantial progress has been made during the most recent STA period toward restoration of licensed operation; or
- No progress has been made during the most recent STA period for reasons clearly beyond the licensee's control, and the licensee has taken all possible steps to expeditiously resolve the problem.

Our review indicates that the licensee has made substantial progress toward restoration of licensed operation. Thus, extension of STA is warranted. Our review further indicates that the

¹ KFI is licensed for operation on 640 kHz with 50 kilowatts, unlimited hours, employing a nondirectional antenna (ND-1-U). Auxiliary antenna BXL-20000216AAQ is licensed for operation with 25 kilowatts, unlimited hours.

requested modification of STA will provide for the protection of workers at the permit site.

Accordingly, the request for extension and modification of STA IS HEREBY GRANTED. Station KFI may continue to operate with reduced power not to exceed 25 kilowatts, employing licensed auxiliary antenna BXL-20000216AAQ. Operation from the southwest tower of the formerly licensed site of Station KTLK, geographic coordinates 34° 05' 04" N, 118° 12' 11" W (NAD 1927), with reduced power not to exceed 20 kilowatts, also is authorized, as necessary to facilitate the construction authorized by Construction Permit BP-20070201BSB. It will be necessary to reduce power or cease operation if complaints of interference are received. Capstar must use whatever means are necessary to protect workers and the public from exposure to radio frequency radiation in excess of the Commission's exposure guidelines. See 47 CFR § 1.1310. Capstar must notify the Commission when licensed operation is restored.

This authority expires on **August 22, 2008**.

Sincerely,

A handwritten signature in black ink, appearing to read "Charles N. Miller". The signature is fluid and cursive, with a long horizontal stroke at the end.
