EXHIBIT 3 - FCC 302-AM APPLICATION

AGREEMENT

This Agreement is entered into as of July, 2017, by and between Two Hearts Communications, LLC ("THC") and WW2, LLC ("WW2")

WHEREAS, THC and WW2 operate AM radio stations that are co-located and di-plexed on a single antenna system (the Di-Plexed Site"),

WHEREAS, as a condition of WW2's construction permit to operate from the Di-Plexed Site, WW2 was required to enter into a binding agreement with THC establishing which of the users of the Di-Plexed Site shall be responsible for funding, installation and maintenance of the filters, traps and other equipment necessary to prevent interaction, intermediation and/or generation of spurious radiation products which may be caused by common usage of the Di-Plexed Site.

WW2 hereby confirms that it has agreed to be, and is, solely responsible for the installation and maintenance of such filters, traps and other equipment as may be necessary to prevent interaction, intermediation and/or generation of spurious radiation products which may be caused by common usage of the Di-Plexed Site and THC acknowledges and agrees that such responsibility shall rest solely with WW2.

**Permit Request for Program Test Authority Pursuant**  
**to Special Operating Condition 6**

The licensee hereby requests Program Test Authority. As a condition for this grant, data is shown in this exhibit as specified in Special Operating Condition 6 of the Construction Permit.

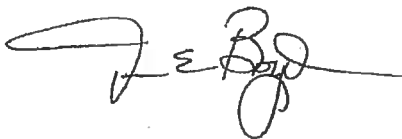

An application on FCC Form 302-AM for KGDC, Walla Walla, Washington, is being filed simultaneously with this application. It shows the result of measured antenna resistance and requests Direct Measurement of Power for KGDC.

On the following page is a schematic of the KGDC-KTEL diplex equipment which shows filter circuits. These circuits were designed and adjusted to prevent interaction, intermodulation and/or generation of spurious radiation products potentially caused by common usage of the same antenna system.

On page three is a tabulation of field measurements made to show that the stations comply with FCC rules concerning harmonics, intermodulation products and spurious emissions which might be caused by interaction between the two stations. A Potomac Instruments PI 4100 (SN: 312) Field Intensity Meter was used to collect this data.

A separate exhibit (3) details the agreement entered into by the two stations involved clearly fixing the responsibility of each with regard to the installation and maintenance of the diplex equipment.

All measurements and the installation of the diplexing equipment was done by the undersigned who has experience making these measurements and whose qualifications are a matter of record with the Federal Communications Commission.
