**Sanderson, TX Minor Amendment to 286A**

**ENVIRONMENTAL STATEMENT**

This proposal does not involve a site location specified under Section 1.1307(a) through (a)(8) of the FCC Rules.

The proposed LPTV produces an ERP that is equal to or less than 0.5 kilowatts. Assuming: (a) a maximum ERP of 1.0 kilowatts (twice 0.5 kw for circular polarization); (b) a relative field of less than 0.7 in the critical downward angles; and (c) a distance of at least 10 meters from the lowest antenna element to 2 meters above the *top floor of the building*, the maximum power density is calculated as follows:

$$S = 33.4 (F)(F)(ERP) / [(R)(R)]$$

Where,            S equals power density in uW/cm<sup>2</sup>  
                      F equals the relative field factor  
                      ERP equals the effective radiate power in watts  
                      R equals the distance in meters

$$= 33.4 (0.7)(0.7)(1,000) / [(10)(10)]$$

$$= 163.7 \text{ uW/cm}^2$$

163.7 uW/cm<sup>2</sup> represents less than the uncontrolled power density limit (200 uW/cm<sup>2</sup> for FM). The electromagnetic radiation from this proposed operation will not produce a value in excess of the radiation standard. The electromagnetic radiation from the proposed operation will not combine with other facilities on or near the structure to produce a significant change in value.

If this is a structure that may support various other operations, the applicant will cooperate with the other operators in establishing a plan for work done on the structure in close proximity to the existing antenna.
