Subject: Program Test Authority -- WVIS -- BLH-20080611AAE

This e-mail is in response to WVIS' license application BLH-20080611AAE to cover construction permit BPH-20010411AAD.

The license application contains a request to permit WVIS to increase ERP from the 32 kW specified in the construction permit to 50 kW, pursuant to 47 CFR Section 73.1690(c)(7). WVIS is fully spaced under Section 73.207 to all other licensed stations, construction permits and vacant allotments, in accordance with Section 73.207. Accordingly, the request to increase ERP to 50 KW is approved. In order that the Commission's records show the proper power level for WVIS while the license application is being reviewed, construction permit BPH-20010411AAD is separately being reissued to show an ERP of 50 kW.

Program test authority IS GRANTED to permit WVIS to commence operation with the facilities specified in construction permit BPH-20010411AAD, with an ERP of 50 kW.

With the grant of program test authority, further processing on an earlier license application, BMLH-20071214AAN, is no longer necessary. That license application is being dismissed separately, via public notice only (no letter will be sent).

This e-mail is being sent in lieu of a letter for the same purpose, in order to get the grant of program test authority to WVIS as soon as possible. The licensee should keep a copy for the station's records. The Commission's CDBS database will also be updated to show the grant of program test authority.
