Special operating conditions or restrictions:

- 1 The permittee/licensee in coordination with other users of the site must reduce power or cease operation as necessary to protect persons having access to the site, tower or antenna from radiofrequency electromagnetic fields in excess of FCC guidelines.
- 2 The tower is shunt excited with a vertical half wave dipole mounted in the center of one face. The tower electrical height of 195.2 degrees allows a current maxima to occur at the feed point in wire 279 which connects to wire 278 which is a vertical wire running from 207' to 450' up the tower with 8.7 amps at the wire base for 1 kW. Wires 280 and 281 extend down to opposite tower legs 60' above ground providing a counterpoise effect.
- 3 In lieu of a special formula the FCC note that nighttime skywave calculations are to be undertaken using formula 73.160(b)(1) with an electrical height of 140 degrees and an inverse filed strength of 370.5 mV/m @ 1 kM for 1 kW.
